## An Intuitive Touchscreen Interface

A tablet-like touchscreen experience customised to your business needs.

Swipe, tap, scroll, and pinch your way through task-focused apps with ease. The **AltaLink®** and **VersaLink®** family of products offers true tablet-like functionality that allows you to configure jobs by scrolling, just like a tablet! Its intuitive design is simple to use, resulting in fewer clicks to complete a job and less time spent at the printer.

The user screen is app-driven and task-specific, allowing you to customise it to fit your business preferences by placing the apps used most front and center. And installation “wizards” make setup fast and easy — even for non-technical users — without having to call (and wait for) IT.
